# Brute Drive

## E.W.S. Brute Drive(BD-1)

Brute Drive (BD-1) is a new distortion pedal designed by EWS. Compared to it's extreme cousin, Fuzzy Drive (FD-1), the BD-1 is designed for smooth, classic distortion sounds. With intuitive controls and a classic layout design; Volume, Gain and Tone, this versatile pedal also incorporates a Boost Switch for amplifying the low-mid/gain up to 10db!

Housed in bullet proof aluminum and as always true bypass, the Brute Drive (BD-1) will be an instant classic!

### Control

Vol: controls the volume.

Gain: controls the distortion level.

Tone: controls the treble level.

### Boost Switch

Boost is only available when pedal is ON. The low-mid/gain boost will allow your solos to cut through.

### On/Off Switch

Turns the effect ON or OFF. Since the pedal is true bypass, there is no loss in tone when the effect is OFF.

### Spec

Size(W/D/H) 112mm/65mm/50mm

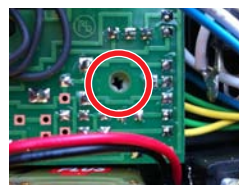

Weight 240g

True Bypass Switching

Power Consumption 9VDC/11mA

Batter Type 9VDC(006P)x1

AC Adapter 9VDC, Negative Tips  
(Optional) (Regulated recommended)

With the internal trimmer, you can adjust the level of boost in the mid frequencies.

(The trimmer is located on sub PCB under the main PCB)

Mid boost  
/ at 320 Hz, +/- 10dB  
Factory Setting  
/+5~6 dB

LBD does comply with external power supply ranging from 9~18V, but it is designed to work best with 9V. Using 12~18V power supply should not cause damage to LBD, but please be aware that it may cause the gain to drastically decrease at a certain point when adjusting the Gain knob. It may also alter the feel of the distortion, and increase the level of the noise. Additionally, please note that if you use a switching type external power supply with LBD, switching noise may mix into the effect sound.
